PFS:GRAPH is the ideal tool for the decision-maker who knows a picture is the fastest way to prove a point. A powerful communication and decision tool, PFS:GRAPH works as a stand-alone system, or may be interfaced directly with PFS:FILE data and VisiCalc® files to transform facts and figures into easy-to-grasp visuals. In addition, the Apple IIe version of PFS:FILE generates business graphics which can be incorporated directly into a PFS: WRITE document.

PFS:GRAPH provides presentation quality bar, line and pie charts in just minutes. To create your visuals, all you do is specify the kind of graph you want and enter your information. It's easy to experiment with different types of graphs until you find the best way to display your data. You can change graph types on the screen, right before your eyes, in seconds. You may want to dramatize comparisons among data by mixing and matching line and bar graphs. You can also stack bar graphs, or display them side-by-side for comparison. PFS:GRAPH lets you put up to four graphs on a single set of axes. Automatic formatting, scaling, legend labeling and pattern-fill make it simple to create clear, informative visuals for sales presentations, meetings, reports and documentation.

PFS:GRAPH is a member of the PFS Family of Software, which includes PFS:FILE, a powerful information management tool, PFS:REPORT, which produces tabular summaries and calculations from FILE data, and PFS: WRITE for Apple IIe, which produces written documents quickly and easily. All PFS products are fully integrated and are designed so that a novice can master each in less than an hour.

Pies with up to eight segments can be drawn with PFS:GRAPH.

You can have your choice of three types of X-axis data: words; dates in days, months, quarters, or years; and numbers.

Hardware Requirements

Below are recommended system configurations. Consult the software supplier about additional configurations.
