Note: The Reference grounds are the real Alto grounds in the Printer Cable but are only used as the reference levels for the differential line receivers in the Dorado, the Ground of the Alto never gets tied directly to the Ground of the Dorado. THIS IS VERY IMPORTANT

# TO MAKE BASEBOARD PROMS (INTEL 2716)

- ① INSTALL PERSONALITY MODULE  
PM 9052 INTEL 2716 WITH SWITCH IN FIXED MODE
- ② CABLE UP TO THE ALTO, ALSO ERASE OLD EPROMS IF NECESSARY.
- ③ START UP AND BOOT PROM DISK.
- ④ TYPE `ⓐ DORADOBASEROM-BLOW.COM`
- ⑤ IF ~~THE~~ A CHANGE HAS BEEN MADE THEN TYPE `ⓑ DORADOBASEROM-COMPILE.COM`  
WHICH WILL GO TO MAXC AND GET THE NEW EPROM FILES  
THEN REPEAT STEP 4.
- ⑥ FOLLOW INSTRUCTIONS ON DISPLAY, THE NUMBERS FOR THE  
EPROMS ARE DISPLAYED IN HEX SO USE THE TOP 5 BITS  
TO TELL WHICH PROM YOU ARE BLOWING.

# DORADO SCHEMATICS

Copy of Clock Register

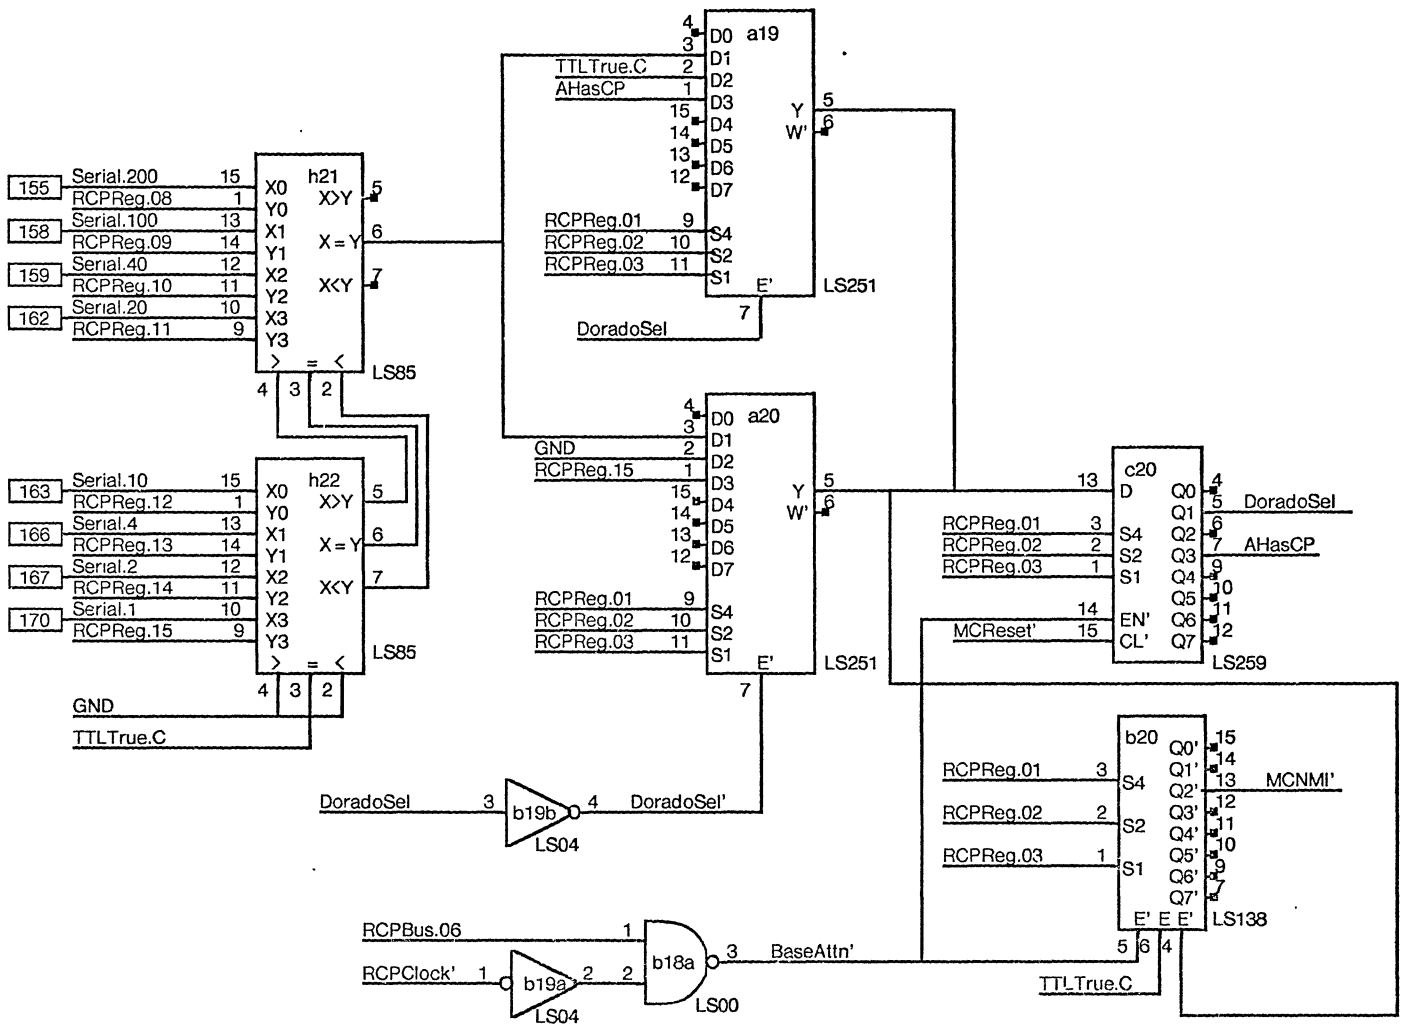

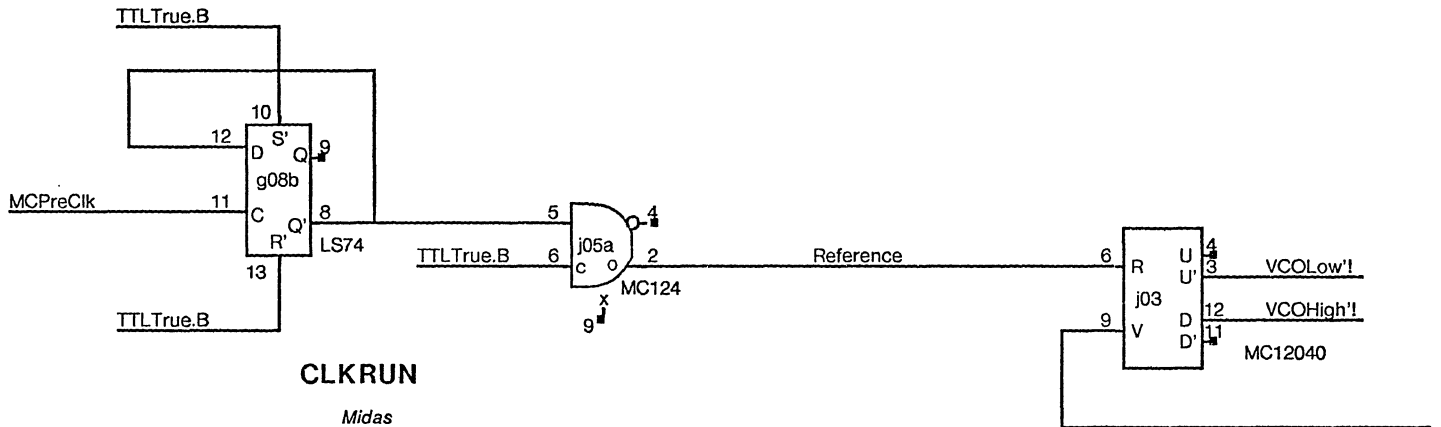

RAMS ARE OPTIONAL

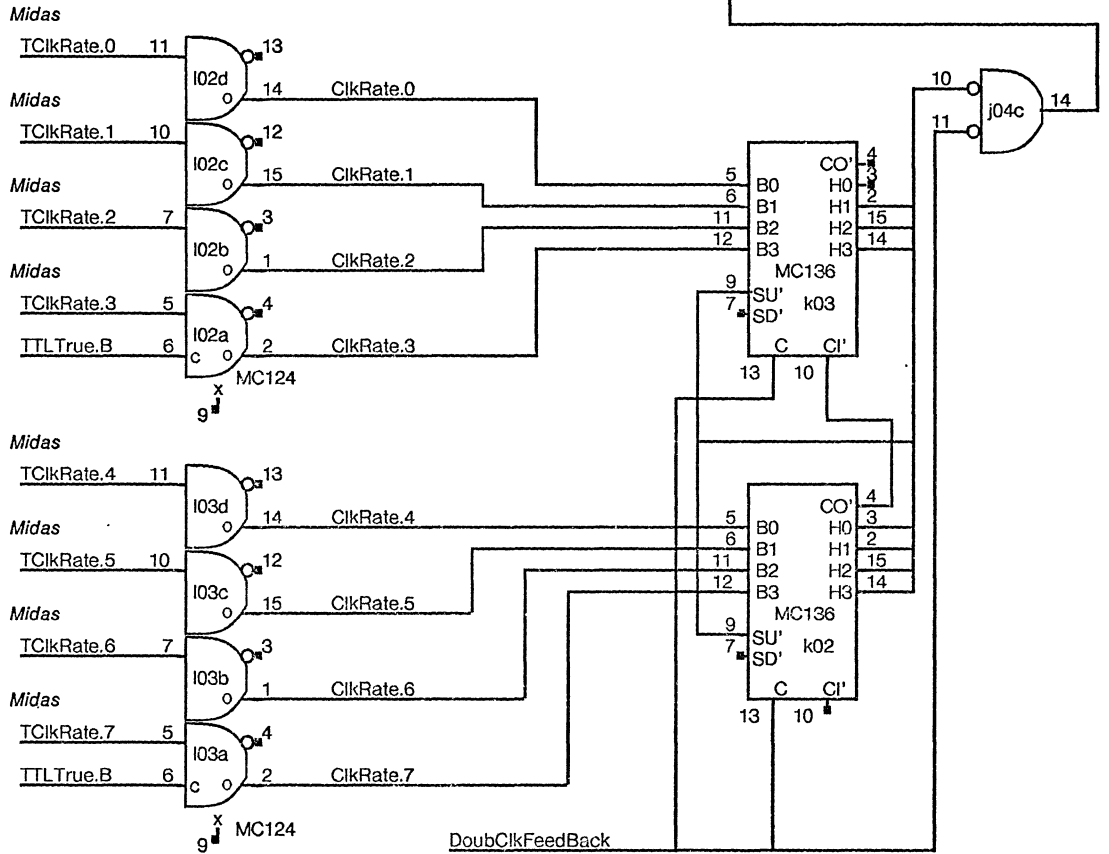

0 => No change  
 1 => Select Dorado from RCPReg[8-15]  
 2 => Break microcomputer if Dorado is selected  
 3 => CPBus control ← If Dorado is selected:  
     If RCPReg.15 = 1, Alto has Bus  
     If RCPReg.15 = 0, Microcomputer has Bus  
     Else No Change

**CLKRUN**

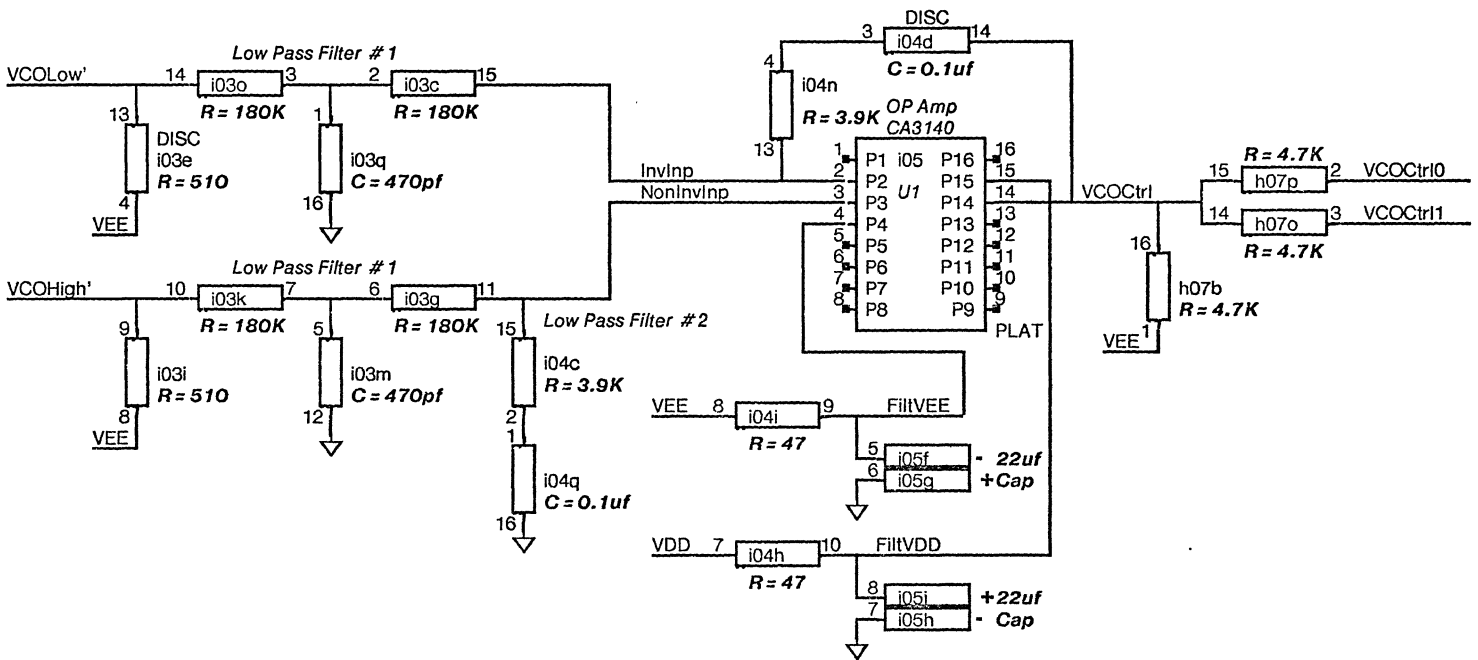

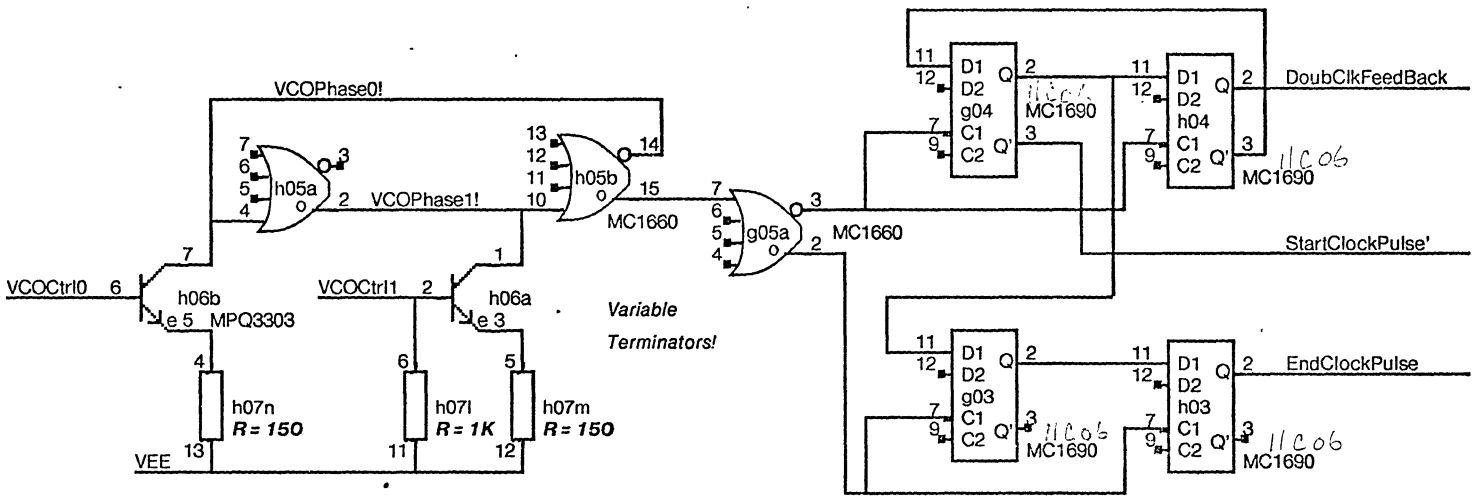

This circuit multiplies the basic 490kHz reference signal by the integer ClkRate + 1.

ClkRate (hex)	Half clock
70	18 ns
66	20 ns
5D	22 ns
52	25 ns
44	30 ns

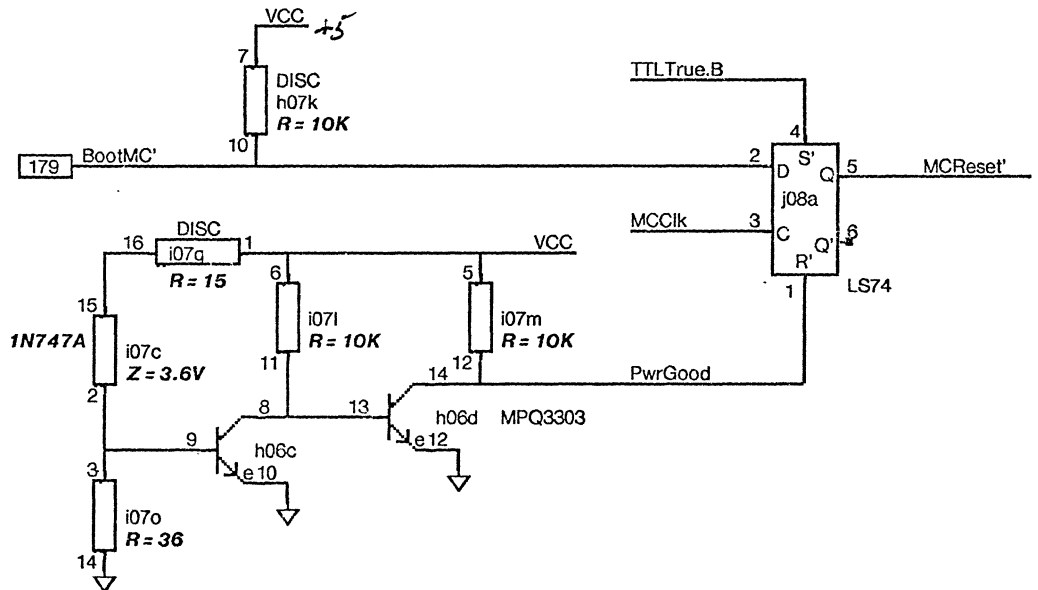

**TTL True Generation**

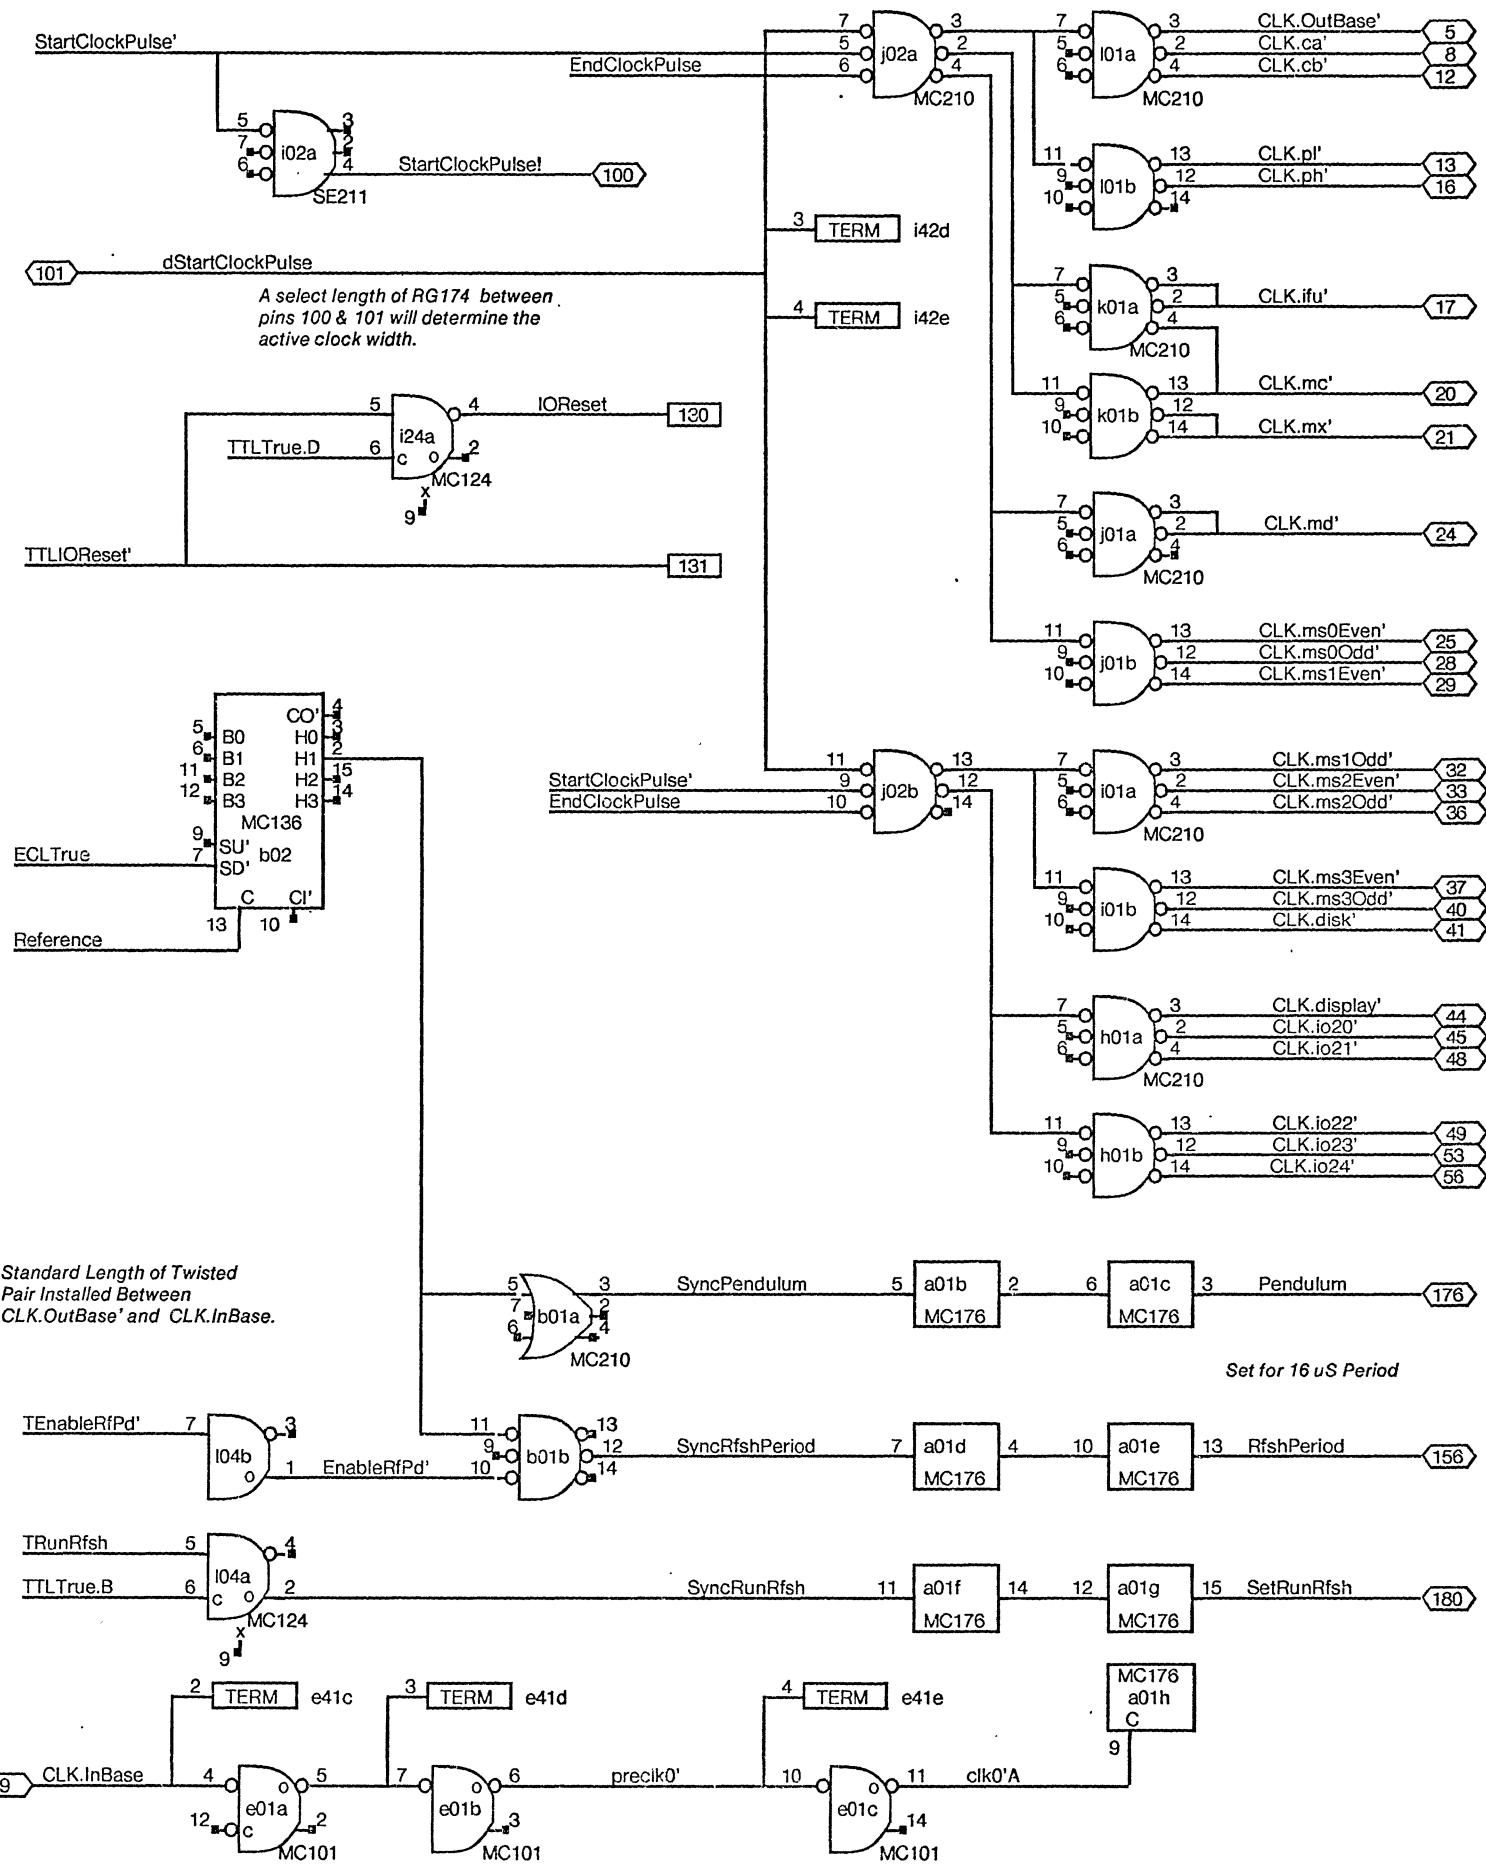

Loop Filter and System VCO

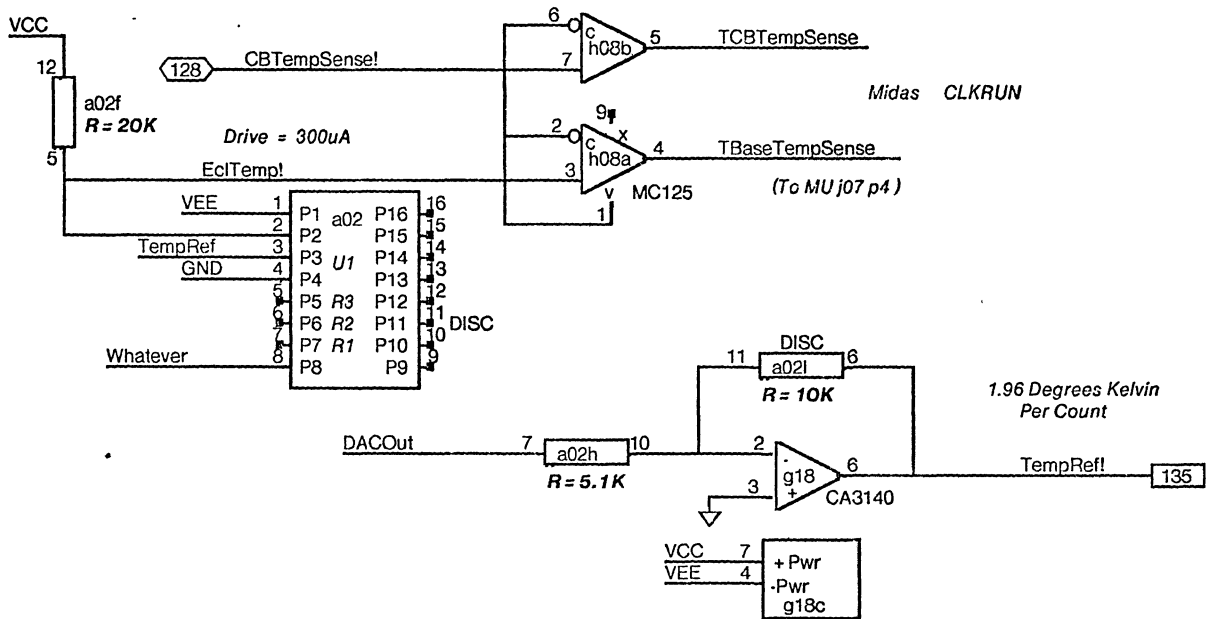

Power On Reset  
Power Good at 4.5V

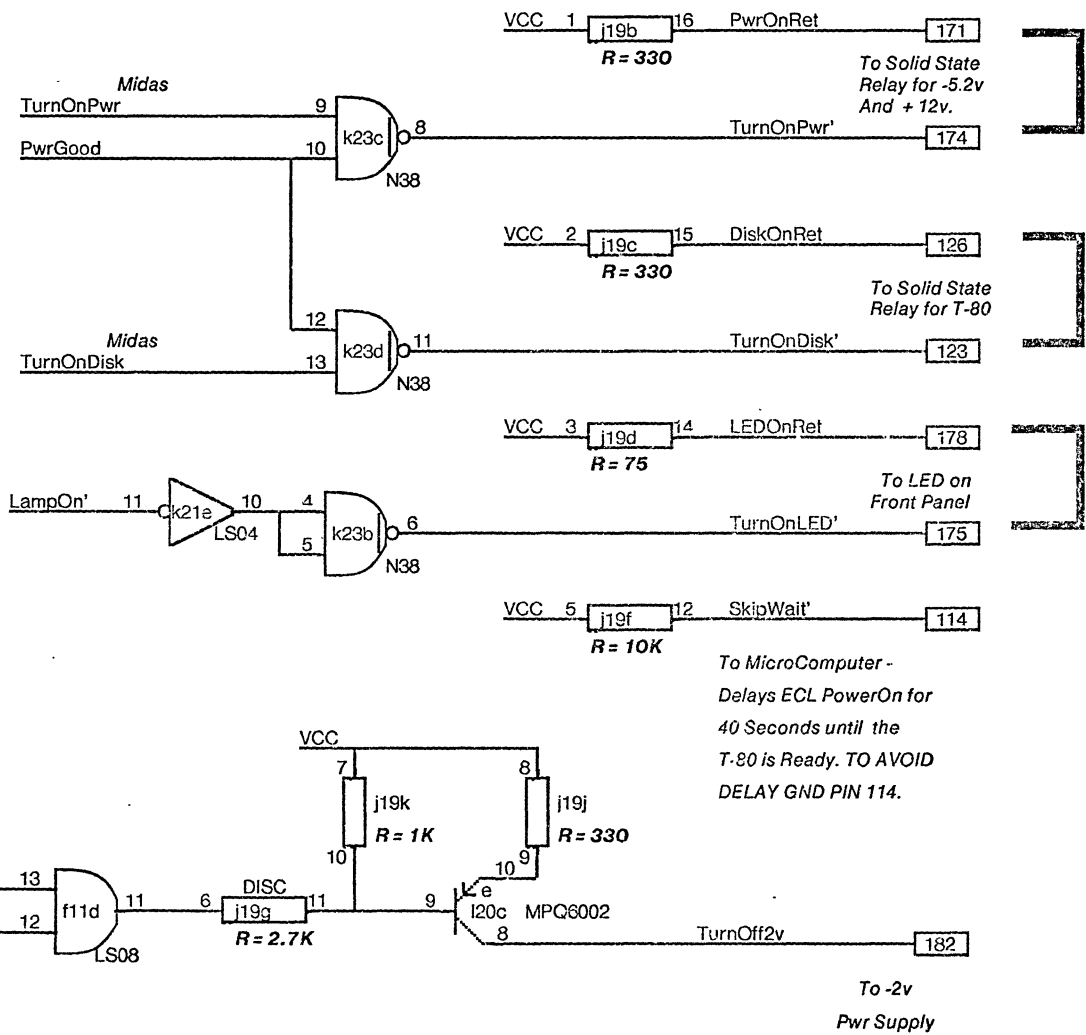

**LED FLASH Decoder**  
Lite always ON - BOOTED

- 1 Normal Wait
- 2 Unable to Boot Dorado
- 3 Transient Power Problem
- 4 Current (NOW) Power Problem
- 5 Microcomputer Shutdown
- 6 Over Temperature
- 7 Microcomputer unable to get control of CP Bus to do its duties

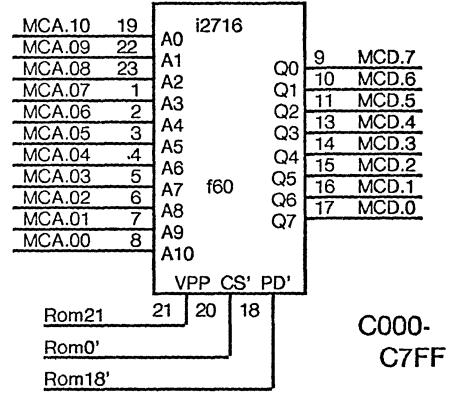

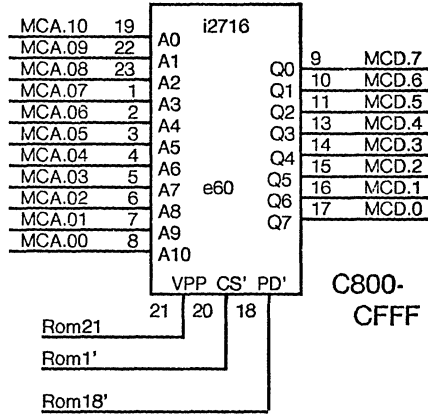

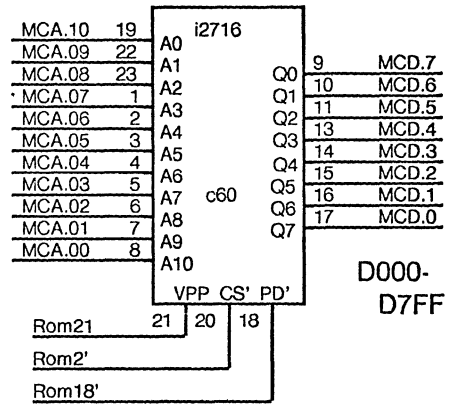

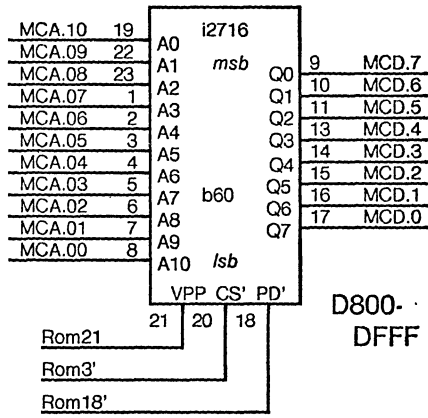

NO LITE - Microcomputer is LOST or all power is OFF.

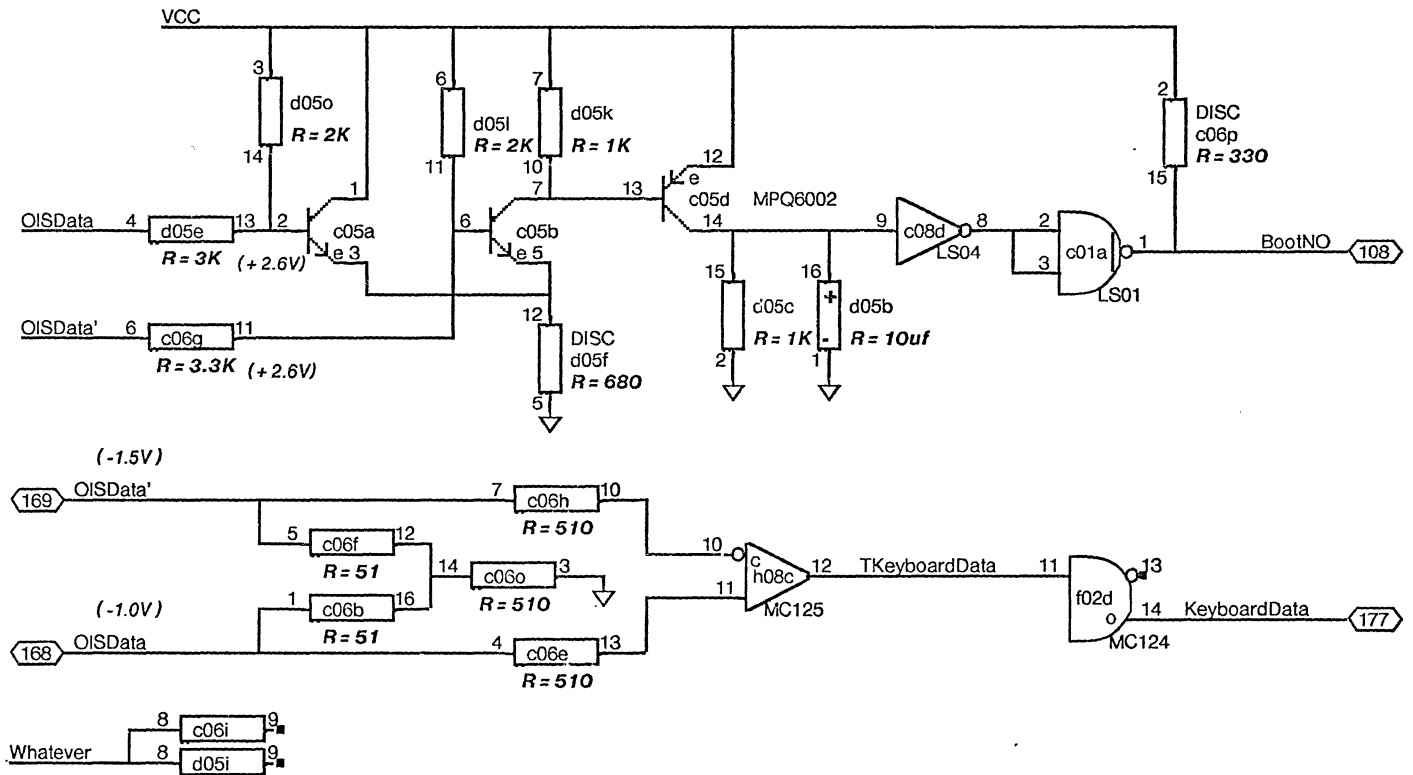

For Future Baseboard Ethernet

NOTES:

All diodes are HP 5082-2835 unless otherwise noted

Locations b60, c60, e60, f60, b61, c61, h61, and i61 a are EPROMS and must be programmed

Location k22 can use a 74151 instead of a 74S151

Location l49 must be loaded with a SIP having pins 2,4,5,&7 cut.
