

ULOCKSEG(a)

ULOCKSEG(a)

NAME

ulockseg – decrement lock count of segment

SYNOPSIS

(ulockseg = 14.)
ulockseg (segnum)

DESCRIPTION

The lock count on the segment indexed by *segnum* is decremented. *Ulockseg* is used primarily by the process manager to remove kernel processes from memory. A value of 1 is returned from C.

ALSO SEE"

alockseg(a), lockseg(a), ulockid(a)

DIAGNOSTICS

C returns -1 if the *segnum* points to a null segment table entry. Fault return with code 10 if *segnum* exceeds the available number of segment table entries.
