CHMOD(c)   CHMOD(c)

NAME

    chmod — change mode of file

SYNOPSIS

    chmod = 15.

ARGUMENTS(input)

    capability associated with working directory of sender process
    0 - name byte offset into message
    1 - mode
    2 - file pathname

VALUES(returned)

    none

DESCRIPTION

    The file specified by the given file name has its mode changed to *mode*. Modes are described in chmod(II). Only the owner of a file or the super-user may change the mode.

SEE ALSO

    chmod(I), chmod(II).

DIAGNOSTICS

    An error status byte is returned if the given file name cannot be found or if the current user is neither the owner of the file nor the super-user.
